Centralize AppSec Results.
Uplevel AppSec Performance.

AppSec teams are challenged with distilling thousands or even millions of findings from hundreds of tools. Manual triage, reams of spreadsheets and haphazard reporting compound the issues. DefectDojo delivers a single source of truth for a holistic, accurate risk picture that enables teams to fix what matters at the right time, uplevel security performance with automation, and scale globally.

Centralize data for better risk assessment

Aggregate data from all your tools in one place
- DefectDojo ingests data from over 170 security tools and platforms including SAST, DAST, infrastructure scanners, and SCA

Prioritize and manage risk seamlessly
- Output accurate, prioritized data to drive remediation efforts

Unify & centralize visibility for all security tools
- Compile comprehensive data visualization and metrics across teams, products, and business units
- Distill & deduplicate vulnerabilities to a single actionable report

Uplevel security performance with automation

Automate security scan aggregation, comparison, and review
- Resolve findings to endpoints, components, and apps
- Track vital product & security information
- Customize security posture scoring

Deduplicate findings for better results
- Deduplicate across a single tool, or multiple tools
- Create one issue per finding
- Attain accurate risk reporting per product/project

Reimport
- Automatically diff scans over time
- Automatically close fixed vulnerabilities
- Provide historical context
- Reduce findings from automation

Threat Intelligence (with Exploit Prediction Scoring System)
- Get risk-based prioritization that assesses the probability that a specific vulnerability will be exploited.
- Automatically enrich and update all data in DefectDojo

Bidirectional Jira sync
- Maintain a single source of truth across both platforms
- Let the dev team work in their preferred environment
- Simplify transition from vulnerability detection to remediation

Scale Globally.
Execute locally.

Flexible architecture that works with your process
- Add or remove security tools from the DefectDojo platform on demand

**Granular role-based access controls to maintain security**
- Ensure only authorized access with role-based controls.

Grow your program without worry
- Process millions of findings from hundreds of tools

Empower security teams to focus on strategy, not routines

Develop seamless collaboration between development, security, and leadership

About DefectDojo

DefectDojo is the company and the product that powers DevSecOps. Our open platform transforms security information management, connecting security strategy and informed execution for intelligent risk management. Security and DevSecOps teams can aggregate, automate, and integrate data from more than 160 security tools for a unified view of security posture and compliance, streamlined workflows, and improved decision-making. DefectDojo was created by security pros for security pros. To learn more, visit defectdojo.com.
